Drink Clean – Breathe Clean – Sleep Well

Whole Home Filtration Unit For Municipal Systems

Stage 1

Stage 1 uses a multi faceted filter to filter out large particles greater than 5 micron and to condition the incoming water so it can no longer form calcium carbonate. This filtration process extends the life and reduces maintenance of the proprietary element in the next stage.

- Filters out sediment
- Conditions water so glasses and faucets remain spotless

Stage 2

Stage 2 uses our proprietary filter to filter out bacteria, viruses, cysts, spores, and other pathogens. It is engineered with an activated carbon high surface area paper to reduce pathogens, pesticides, pharmaceuticals, forever chemicals (PFOA/PFOS), and heavy metals (including lead). Incorporates Agion silver particles to keep filter from biofouling.

Stage 3

Stage 3 Final polishing of PFOA/PFOS, lead, chlorine, pesticides, and other contaminants with a high-capacity carbon filter. Improves taste and smell of water. This carbon will outperform similar carbons due to the purity of water at this step of the process.
